Photosensitive Sensor

Parameter list

VCC	External connection for 5 v
GND	External connection for GND
ADC	Analog output port
OUT	Digital analog port
PCB size	50mm*20mm
Connector type	5264
PWR	Power indicator
LED1	Light up when the brightness less than the threshold value

The output range of sound intensity detected by the module ADC is 0-1023. The stronger the intensity, the smaller the value.

When the value detected by the output of the OUT module is greater than the threshold value (the threshold value can be adjusted), the output is 0, and the output will be 1 when the value less than the threshold value
